The Kinesia 360 motor assessment system is cleared for sale as a medical device in the US, Europe, Canada, and Australia and can be used in many countries worldwide in clinical trials when labeled for research-use only and approved by an IRB.

The Kinesia 360 motor assessment system is intended to monitor physical motion and muscle activity to quantify kinematics of movement disorder symptoms such as tremor and assess activity in any instance where quantifiable analysis of motion and muscle activity is desired. In Canada, the Kinesia 360 system may only be used for therapeutic (not diagnostic) purposes of non-serious situations or conditions.

Kinesia 360™ systems start at $4990. Lease options also available. For a quote, please contact info@glneurotech.com or call 1-216-361-5410.

WEARABLE, OBJECTIVE, CONTINUOUS MONITORING OF MOVEMENT DISORDERS

CONTINUOUS AMBULATORY MONITORING ✓

REMOTE DATA MANAGEMENT ✓

REAL-TIME DATA ANALYSIS & REPORTING ✓

MEASURE WITH HIGH SENSITIVITY & RELIABILITY ✓
The Sensors

The Kinesia 360 user kit includes two sensors, one worn on the wrist and one on the ankle, to allow an accurate and clinically validated assessment of Parkinson's motor symptoms. Sensors record data all day and recharge overnight for extended home use.

Kinesia™ products are used as outcome measures in Phase I, II, III and IV clinical trials.

Kinesia technology is integrated in clinical trials around the globe for Parkinson's disease, essential tremor and other movement disorders. Intelligent remote sensing technology increases sensitivity and reliability of outcome measures, improves efficiency with web applications and expands accessibility.

validated
real-time
secure

The Kinesia 360™ motor assessment system provides low burden method for remote, continuous measurement of patient symptoms. Sensors worn on the wrist and ankle combined with a mobile application continuously record data for assessment of tremor, slowness, dyskinesia and mobility. Data from the motion sensors is uploaded to the Kinesia Web Portal and algorithms are used to detect symptoms and calculate severity scores every two minutes on a scale shown to be highly correlated with clinician ratings.

Kinesia 360 Smartphone App

The smartphone is preloaded with the Kinesia 360 software app and guides patients through daily use. The app also includes electronic diaries for capturing patient-reported outcomes and customizable medication diaries. The system also includes mobile device management to ensure software is always current and usage can be controlled.

Kinesia 360 Reports

Kinesia 360 provides motor symptom data every two-minutes as well as daily summaries. Customized data reporting is available.

Secure Web Portal

Motion and diary data are transmitted to a secure cloud via mobile broadband for processing and storage in a 21 CFR Part 11 compliant database. Clinicians and researchers can access reports via the Kinesia web portal and view real-time patient compliance.
